

ANETTEL

Technology...

...in a simple way!

Position: Java Backend Developer - Full time

Born by professionals with years of experience on ICT, **ANETTEL sh.p.k** is an innovative company that offers Software, Web development and more. Passion, professionalism, quality, creativity, reliability & efficiency is our DNA. We have been chosen by many international companies through the years as well as many important national companies.

What you will really be doing:

- Participate on the daily team stand ups.
- Provide your own feedback on retrospectives, we don't have a "finger pointing" mentality; we try to learn out of our own mistakes.
- Conduct code reviews. Participate in efficient and recyclable code :)
- Actively being involved on the project estimation and sprint planning.
- Design and implement using technologies that meets the project's expectations. Be prepared to heavily work with Spring Framework and not only.
- Pay emphasis on test driven development and aim on increasing test coverage.
- Take ownership of what you develop and actively be involved on production maintenance.
 - Be opened to critics from testing engineers and QA. that will try to super-test your code and provide a positive feedback on how to meet the requirements.
 - Code, code, code and more code :)

Requirements, Expectations

- BSc or Master in Computer Science (Informatics) or any related field with application to OOP, Data Structures and Algorithms.
- 1/2+ years of experience with JAVA.
- Medium (preferably strong) background in concurrency, multi threading and Socket I/O.
- Experience with test driven development and clean code principles.
- Proficient in OOP and design patterns.
- Working with high-availability, high-performance, scalable systems.
- Working with database systems and SQL.
- Strong communication skills in English, being able to collaborate with remote teams.
- An aptitude in enhancing your skills and researching into latest technologies.
- Measure your success by the success of your team.

Desired Skills

- Spring Framework knowledge gives you an excellent advantage.
- Experience with Rest, JDBC, JPS, MVC, Integration, Boot, Cloud.
- Experience with event based architectures using messaging technologies.
- Familiarity with Extreme Programming (XP).
- Experience with NoSQL such as MongoDB or Redis etc.
- Experience with Git.
- Software Engineering Life-cycle.

To succeed in this position, we expect you to have:

- Strong technical skills in Java.
- Experience working with web technologies (you should be comfortable with HTML, CSS and JavaScript, having made some minor fixes to a web site 5 years ago is not quite enough).
- Experience working directly with and not limited to Network Engineers, Database Administrators and other fellow Programmers with particular preferences towards coding styles :)
- Good (problem-solving attitude not problem-emphasizing attitude) communication skills.
- Fluent verbal and written English.
- Availability to Start working from February.

Very competitive salary.
